Trần Xuân Duy

Java Developer

0385199661 trxuanduy24@gmail.com Tu Son, Bac Ninh

SUMMARY

Dedicated Java Developer with 2 years of professional experience in designing and developing scalable backend systems. Proficient in Java, Spring Boot, and RESTful API development. Passionate about writing clean code and optimizing database performance.

EDUCATION

University of Transport and Communications June 2025 - Present

Major: Information Technology

Currently studying (Part-time online)

FPT Polytechnic Sep 2021 - June 2024

Major: Software Development

GPA: 8.1

WORK EXPERIENCE

FPT Software | Project: VNA - MCAB Jul 2025 - Present

Java Backend Developer

Stack: Java, Spring Boot, SQL Server, Docker
-Designed and implemented a dynamic algorithm to generate lucky numbers based on customizable user-defined patterns.
-Developed core backend modules for lucky number inventory management and automated discount programs, ensuring accuracy in pricing calculations.
-Performance Optimization: Drastically reduced search query time on the production environment from over 1 minute to under 5 seconds by implementing reverse indexing and table partitioning techniques in SQL Server.
-Containerized the backend application using Docker to ensure deployment consistency across all environments.
-Collaborated with cross-functional teams in an Agile environment to gather requirements, plan sprints, and deliver high-quality features to production.

FPT Software | Project: VNA – IdentifierCustomer Jan 2025 - Jun 2025

Java Backend Developer

Stack: Java, Spring Boot, SQL Server
- Re-architected and implemented the core RESTful APIs for the flight ticket booking flow, ensuring high availability and seamless user experience across diverse booking channels.
- Developed a dynamic customer segmentation engine to categorize frequent flyer program (FFP) members based on demographic attributes (occupation, age group, geographic region).
- Integrated the booking flow with the segmentation engine to automatically apply personalized, targeted promotional offers, effectively shifting business strategy away from mass discounting.

FPT Software | Project: VNA - Monitoring System May 2024 - Dec 2024

Full Stack Developer

Stack: Java, Spring Boot, Thymeleaf, Tailwind CSS
- Developed an internal web dashboard using Spring Boot and Thymeleaf to centrally monitor and manage agent applications across the VNA ecosystem.
- Integrated backend APIs to track real-time system metrics, efficiently logging request success and error rates to ensure high system reliability and uptime.

- Built clean, responsive, and user-friendly interfaces using Tailwind CSS, enabling the internal operations team to quickly identify, trace, and troubleshoot system anomalies.
- Collaborated within a cross-functional 5-member Agile team to rapidly iterate on monitoring features and enhance internal operational efficiency.

FPT Software Dec 2023 - Apr 2024

Java Fresher

- Completed an intensive training program focusing on core Java, Object-Oriented Programming (OOP), and the Spring Framework ecosystem.
- Gained hands-on experience by building practice projects using Spring Boot, RESTful APIs, and relational databases.
- Participated in business English and soft skills training to enhance communication, problem-solving, and teamwork capabilities.
- Learned and applied essential software development practices including Git version control, Maven, and Agile/Scrum methodologies.

SKILLS

Backend	Java, Spring Boot
Database	SQL Server
Tools	Redis, Docker, Git
AI & Development	AI-Assisted Coding, Prompt Engineering

INTERESTS

Football
Badminton
Music
